ERP Extensions Module

Soft Tech's ERP software solution provides the ideal start-up option to power integration between Soft Tech V6 and Microsoft's Business Central.

ERP (Enterprise Resource Planning) is a system that integrates everyday essential business processes into one complete system, all sharing one true source of centralized data. Get more visibility over your business from front office through to factory floor and the building site.

Soft Tech's ERP Extensions Module offers a pre-defined ERP solution for businesses who want to make a start on improving efficiencies within their estimation and manufacturing workflow processes.

Soft Tech V6 data link to ERP

Much like V6, an ERP system is an empty shell that requires information to be added before you can begin using it. ERP Extensions Module takes V6 data regarding resources, i.e. extrusions, hardware and fills etc., and imports the most common data into Microsoft's Business Central ERP program.

The initial integration work has been done for you

Instead of starting from scratch, Soft Tech can provide a base data transfer to Microsoft's Business Central ERP platform. Once this base data is available in Business Central, you can choose to customize your specific requirements beyond the basic data, either internally yourself, or with the assistance of our specialist teams at Soft Tech.

Benefits of using Soft Tech's ERP Extensions Module

- Save's you time and money when implementing an ERP system into your business, as the link for sharing basic data from V6 to Business Central has already been created.

- Working from one true source of centralized data results in more accuracy and no need for double data entry. The basic common data is automatically linked between V6 and your ERP.

- Gain more visibility over your business from front office through to factory floor and on the building site.

API's & Descriptions

A basic set of pre-defined Application Programming Interfaces (API) allows Soft Tech V6 and Microsoft's Business Central to effectively talk to each other, passing over information between the two applications.

Following is a high level list of the pre-defined base data that is set up to be shared between Soft Tech's ERP Extensions Module and Microsoft's Business Central.
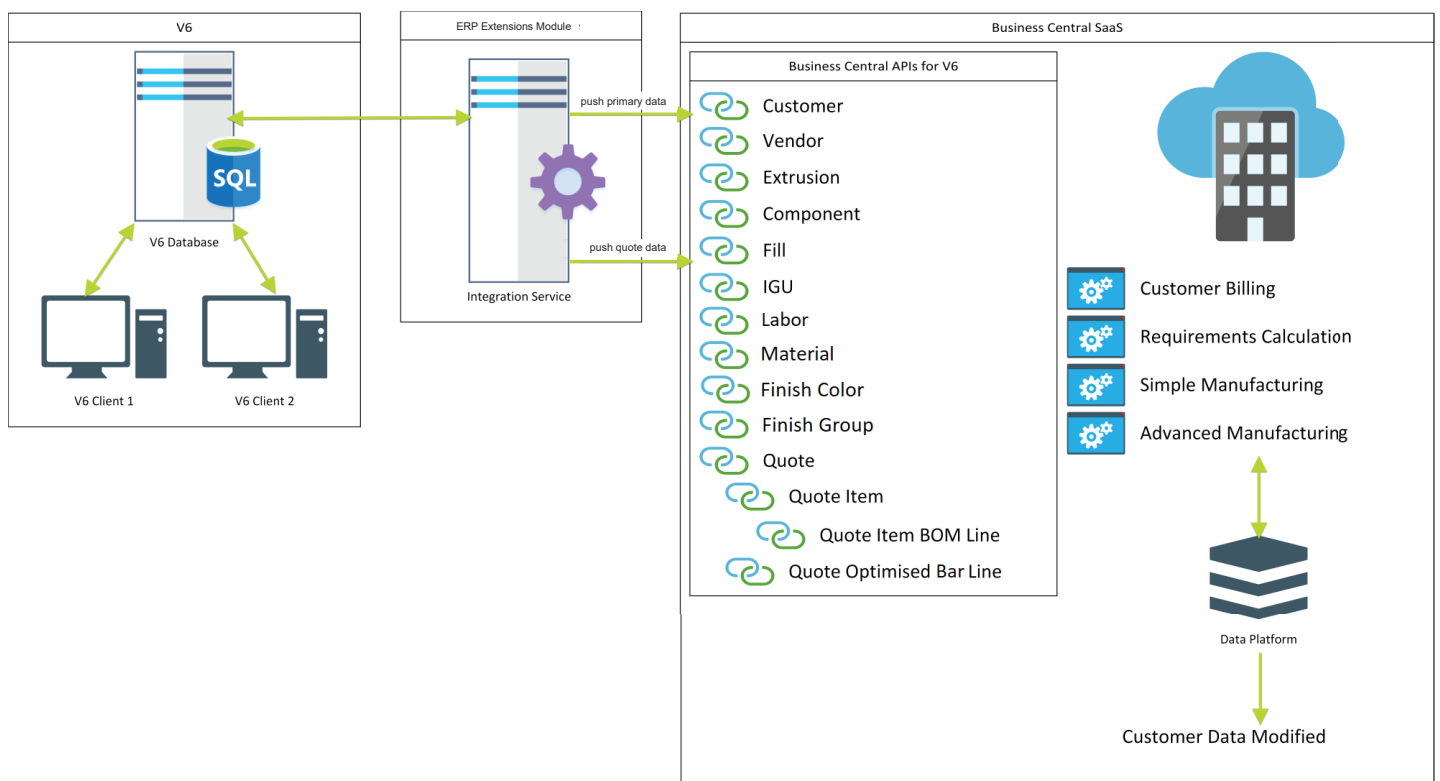

- From Soft Tech V6

RESOURCES - Allows users to create or update resources such as extrusions, components, fills and labor.

QUOTE - Allows users to create or update V6 quote details and related customers.

- Within Business Central

Primary tables maintained in Business Central are updated with data pushed over from V6, enabling the generation of:

- SALES ORDER - Sales orders are generated using this base data from within Business Central.

- PURCHASE ORDER - Purchase orders are generated within Business Central, ready to send to your suppliers.

About Soft Tech

Software specifically designed for manufacturers and fabricators of residential and commercial windows and doors.

- Serving the window and door industry for more than 30 years.
- More than 10,000 customers worldwide.
- End-to-end solutions for your business.
- Software that meets your changing needs.
