

## EVALAYER D-380 High Density EVA film

**EVALAYER High Density Level D-380** is a full cross-linked thermoset EVA film for glass lamination that offers the highest density level of EVA component in the market. Higher density means:

- Stronger adhesion on the laminated glass edges
- Higher UV rays rejection
- Superior Moisture resistant
- Better sound proofing performance

Combining the unparalleled cross-linking capabilities with the **D-380 Density level of EVALAYER**, the laminated glass producers will have unlimited options to offer to their clients on safety, decorative and architectural laminated glass among others.

Contact us for more information. You get more, you can do more. There is only one EVALAYER High Density Level D-380. It is from us.
