# Scan smarter with the smartphone

The barcode scanner has established itself as an indispensable tool in industry and trade – and also long since in the window, door, and roller shutter industry. From goods receipt to status booking in production on through to delivery to the customer, data is recorded and transferred to ERP systems via barcode reading.

However, there are alternatives to the industrial scanner as we know it, namely smartphones and other smart devices that are equipped with the A+W Smart Companion app.

### **A smart companion for all cases, easier and cheaper**

A+W Smart Companion supports your entire value-creation chain and contributes to its digitalization – so you save time and money. Scanning via smartphone app is easier than with conventional scanners and cheaper too. A+W Smart Companion can fulfill all requirements in the window construction industry without any of the disadvantages of traditional scanner hardware.

Replace specialized, expensive hardware with a familiar mobile device that you use every day. This will also save you time, for no training is required.

The user interface is very simple. You can select everything immediately: the camera mode, the read mode. This simplicity and speed of operation is very important for all employees.

### **Mobile info terminal**

The app can also be used as a mobile info terminal. For example, you can display the locations of order components and the content of racks, for communication becomes bidirectional.

Invalid bookings due to incorrect read sequence of the barcodes are prevented since the A+W Smart Companion guides the user. This significantly increases read quality.

Another benefit: with the A+W Smart Companion, you can scan several barcodes at a time, e.g. for element labels on a rack. This represents a significant time savings. Work is more productive and fewer errors are made.

### **Your benefits:**

- Scan, inform, evaluate – securely and efficiently
- Use on mobile, user-friendly devices
- No learning curve: familiar hardware that everybody uses every day
- Runs on iOS and Android
- Depending on requirements, can be used on various smart devices
- Scanning of several barcodes in continuous mode
- Simpler workflows for employees increase productivity
